DOLOR SET AMET

All About Caterpillars

Caterpillar

Fact-file

Where do Caterpillars live?

Caterpillars like to live in hedges and bushes, where there is lots of food and protection. There might even be some in your garden!

What do Caterpillars eat?

Caterpillars are herbivores, so they mainly eat tasty leaves that they go foraging for all day long.

What animals are Caterpillars scared of?

Caterpillars try to avoid birds and wasps which want to eat them!

Are Caterpillars dangerous?

Some Caterpillars have toxic spikes to scare off predators, and need to be handled with care.

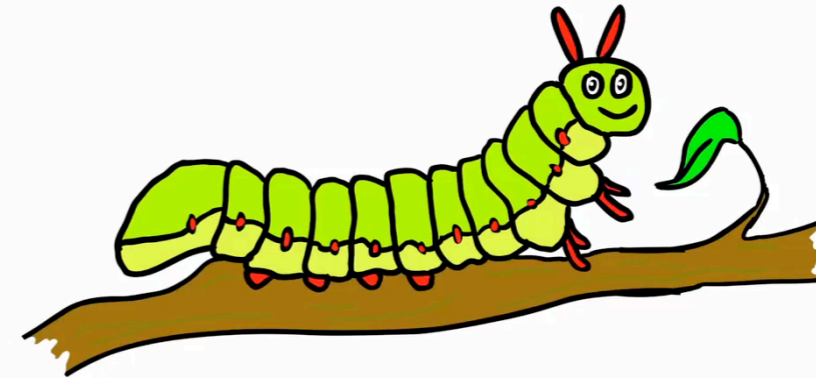

How big are Caterpillars?

Caterpillars come in all shapes, sizes and colours. The smallest Caterpillars can be as small as a pin head, but others can grow up to 11cm long!

How many types of Caterpillar are there?

There are over 20,000 different species of Caterpillar and they live all over the world!

A Caterpillars favourite food is a tasty leaf
